SUMMARY

DevOps and Cloud Engineer with 4+ years of experience in automating, optimizing IT operations and cloud infrastructure. Adept in managing AWS services, including EC2, VPC, EKS, and S3, while utilizing tools such as Terraform, Docker, and Kubernetes to develop and enhance CI/CD pipelines with Jenkins and GitHub Actions. Proven track record in container orchestration and microservices deployment, significantly reducing build times and enhancing system scalability. Expertise in system Observability with Prometheus and Grafana, as well as efficient scripting in Python and Shell. Committed to advancing cloud security, implementing automated compliance checks, and ensuring high availability. Eager to leverage technical prowess in a dynamic DevOps environment to drive team performance and operational excellence.

TECHNICAL SKILLS

Operating Systems	: Linux, Windows Server
Cloud Platforms	: AWS (EC2, EKS, VPC, IAM, S3, RDS, CFT, ELB, CloudWatch), GCP
IaC & Configuration Management	: Terraform, Ansible, Helm, AWS Cloud Formation
CI/CD Tools	: Jenkins, GitHub Actions, Argo CD, Gitlab CI/CD
Containers & Orchestration	: Docker, Kubernetes, Helm Charts, Amazon ECR, EKS
Build & Code Quality Tools	: Maven, SonarQube, Trivy
Scripting & Automation	: Shell, Python, Groovy
Monitoring & Observability	: Prometheus, Grafana, AWS CloudWatch
Networking & Security	: VPC, Subnets, Load Balancing, DNS (Route53), HTTP/TCP/UDP, SSL/TLS
Collaboration & Agile Tools	: Jira, Confluence, Git, GitHub, Agile

WORK EXPERIENCE

SRS Business Solutions, Hyderabad – Software Engineer

April 2026 – Present

- Deployed scalable AI workloads on AWS GPU optimized EC2 instances, enabling high performance model training and inference.
- Implemented CI/CD pipelines GitHub Actions for automated model deployment, versioning, and rollback, reducing release cycles by 40%.
- Deployed Node.js, Java, and Python applications on AWS EC2 and GCP using Docker and CI/CD pipelines, ensuring scalable, reliable, and cost efficient production environments.
- Created AWS Lambda scripts integrated with Event Bridge to automatically start and stop EC2 instances and identify least utilized resources, reducing cloud costs through on demand scaling.
- Configured and deployed NGINX as a reverse proxy and load balancer for Node.js, Vite, and Python applications, improving scalability, security, and request handling efficiency.

CGI, Hyderabad – Software Engineer

April 2024 – April 2026

- Engineered and managed Terraform modules for reusable infrastructure provisioning, resulting in a 30% reduction in code duplication and enhanced team scalability.
- Provisioned and managed AWS resources VPC, EC2, S3, EKS, Route53, IAM, and CloudWatch ensuring system reliability, scalability, and security.
- Spearheaded Kubernetes adoption on AWS EKS, improving deployment scalability and achieving 20% cost savings through optimized cluster resource allocation.
- Architected and optimized CI/CD pipelines utilizing Jenkins, Maven, and GitHub Actions, which reduced build and

deployment times by 20% and improved release success rates by 30%.

- Designed Helm charts for orchestrating microservices deployments, enabling rapid rollouts and zero downtime upgrades.
- Containerized over 20 microservices using Docker and deployed them to AWS ECR and EKS, ensuring consistent, portable, and scalable application deployments.
- Configured and maintained SonarQube integration in CI pipelines, enforcing code quality and security standards.
- Enhanced system Observability by creating centralized Prometheus and Grafana dashboards, improving real-time alerting and reducing MTTR by 20%.
- Facilitated DevOps best practices by leading internal sessions on Git branching strategies and CI/CD optimization, reducing merge conflicts by 25% and enhancing team velocity.
- Orchestrated Route53 and Kubernetes Ingress integration for automating custom domain provisioning, streamlining service accessibility.
- Established Terraform remote state management utilizing S3 and DynamoDB, enabling team wide collaboration and preventing drift in multi environment infrastructure.
- Deployed Java based applications on Apache Tomcat and NGINX, ensuring secure, high-availability setups for client facing services
- Developed and maintained automation scripts in Python, Groovy, and Shell, eliminating manual processes and saving over 8 hours weekly in operational overhead.
- Partnered cross-functionally with QA and engineering teams to optimize CI test execution, reducing pipeline runtime by 15% and increasing release frequency.

CGI, Hyderabad – Associate Software Engineer

April 2022 – MARCH 2024

- Managed AWS infrastructure including VPCs, EC2, S3, Route53, IAM, and CloudWatch, ensuring high availability and security compliance.
- Assisted in designing VPC peering and VPN setups to enable secure inter VPC communication across projects.
- Performed incident response and Level-1 troubleshooting, maintaining SLA compliance for production support.
- Supported automation of configuration management using Ansible, ensuring consistency and version control of server configurations.
- Implemented Argo CD GitOps workflows for Kubernetes (EKS) deployments, achieving zero-downtime releases and improving deployment synchronization across environments.
- Built reusable Terraform templates for EC2 provisioning and VPC networking, reducing environment setup time from days to hours.
- Deployed Java based applications on Apache Tomcat and NGINX, ensuring secure, high availability setups for client facing services
- Optimized CI/CD pipelines using GitHub Actions and Maven, cutting build and deployment times by 20% and improving delivery reliability.
- Managed Route53 DNS configurations and custom domain integrations for multi region deployments.
- Implemented S3 lifecycle policies and right sizing strategies, resulting in 20% cloud cost savings.

- Set up CloudWatch alarms and dashboards to proactively monitor EC2 and EKS resource utilization, ensuring early detection of performance bottlenecks.
- Mentored interns on CI/CD setup and container fundamentals, contributing to smoother on boarding and team capability growth and Maven, ensuring faster and more reliable software delivery.
- Collaborated in Agile teams, participated in sprint planning, and implemented DevOps feedback loops to improve deployment readiness.
- Leveraged in depth understanding of HTTP, TCP, and UDP protocols to troubleshoot latency and connectivity issues.

EDUCATION

Bachelor of Technology (B.Tech)

Kakatiya Institute of Technology and Sciences - Warangal, 2020

7.93 CGPA

CERTIFICATIONS

AWS Solutions Architect Associate

April, 2026 – April, 2029

HIGHLIGHTS

- Awarded Bronze at CGI for automating deployments and optimizing infrastructure, achieving 20% cost savings by right-sizing resources and improving microservices efficiency across environments.
- Recognized for cross team collaboration and proactive incident management.
